Just below the buttons is a small light sensor; this can be used to tell the outlet when to turn on or off, based on the ambient lighting conditions. However, you can also create a schedule based on a set time of day, as well as sunrise and sunset — though there's no offset, such as 15 minutes before or after sunrise. You can set each outlet to turn on or off based on various environmental factors such as time, temperature, humidity, sunrise and sunset or the actions of other smart-home devices. (Image credit: Future) TP-Link's Kasa Smart Outdoor Plug KP400 comes with two outlets, which means you can control two devices separately. In all, the Ring Outdoor Smart Plug is a good device for those invested in the Ring ecosystem. (Image credit: Wyze) Like all of the Wyze products, the Wyze Plug is an affordable connected home gadget that's great for your small light fixtures or coffee maker. To reiterate, many smart plugs are not as secure or easy to use as advertised, so there's something to be said for TP-Link's consistency and versatility. Using this, you can schedule when you want the appliance to switch on and off — great for switching on the lights when you're on vacation. Create zones Some smart plugs can create zones by connecting to groups of smart plugs. The Starter Kit includes a handy remote, but you can skip that if you want to control it with your voice assistant. Unfortunately, the Lutron Caseta smart wireless kit isn't cheap. It's a large outdoor plug, measuring 4.9 x 2.4 x 2.3 inches, but its housing does contain a Wi-Fi radio which can connect to a router 300 feet away. Some are so sizable, that they can block alternative outlets. Does it have a physical on/off switch or indicator lights? Setup: How easy is it to connect the plug to your Wi-Fi network, and to its app? Scheduling: How robust is the scheduling feature in the app? Features: Are there any other features that distinguish the plug from others? Smart Home Connectivity: How many other smart home systems does the plug work with? It sounds expensive, but smart plugs are actually very reasonably priced, with some costing as little as \$30. The less premium smart plugs come with less intuitive apps, which can make it difficult to schedule and control your smart plug. These too, can be time-based, but you can't specify if something should work only after it gets dark out. You can also set a vacation mode, where the Plug will turn on and off so it looks like you're home, but I'm not sure how useful that is for an outdoor light. Using the Teckin Smart Plug app, you can remotely monitor and control your appliances, and can control and schedule each outlet individually. The best smart plugs will add newfound convenience to your home, giving every appliance some level of smart capabilities. A two-pack can cost as little as \$15, which is cheaper than many of the best smart plugs are for a single unit. It has two outlets, so you can control two devices independently. An offset is also available, if you don't want the default to be sunrise or sunset. Plus the Kasa app has a wide collection of automation features, including scheduling and the ability to control those other TP-Link-brand smart home products. The Kasa Smart Wi-Fi Mini Plug is an upgrade from the brand's Plug Lite HS103, which was only rated for 12 amps. And like Kasa's indoor plugs, the Outdoor Plug benefits from TP-Link's Kasa app. The best smart plugs you can buy today (Image credit: Wemo) The Wemo WiFi Smart Plug is our top choice among the best smart plugs. It's one of the few smart plugs that works with Alexa, Google Assistant and HomeKit. The best budget smart plug is the Kasa Smart Wi-Fi Plug Lite by TP-Link. For just under \$200, you get two plugs, two remotes and the necessary Wi-Fi bridge. Well, it almost is. At the bottom are two plugs, each protected by a rubber flap. These designs are small enough that they won't block secondary outlets. 2. Some smart plugs also let you keep an eye on energy consumption, so you can save money on your energy bills more easily. You can quickly make this back on your energy bills, so it's definitely worth the investment. We've done the research and have tested a range of models to find the best smart plugs the market has to offer. Its design is thin enough that you can fit two per outlet, too. (Image credit: Amazon) The Ring Outdoor smart plug is a massive brick. But, if you don't have Alexa, make sure the smart light you're looking at can connect to the alternatives, such as Google Home. A smart plug essentially sits between a plug and power socket. But at only \$29.99, it's less than half the price of its upscale competitors. The Teckin Smart Power Strip also offers more features than most of the other best smart plugs. If you have other TP-Link devices installed, adding the Kasa Wi-Fi Plug Lite to the mix is a no-brainer. Smart plugs aren't just for inside your home. At the top is a 6.5-inch cord that's long enough to plug the Ring into an outdoor outlet, but still be able to close your outlet's door. Alexa and Google Assistant should be given. Features to look out for Energy Monitor Some smart plugs will record and display the energy use of an appliance on your phone. However, the app unfortunately lacks two-factor authentication. (Image credit: Amazon) The Amazon Smart Plug is simple, compact, and a great value purchase for a low price. That way when someone is around who doesn't have access to your Alexa app, or isn't as familiar with smart home devices, the connected appliance can still be controlled. Unlike a standard smart plug, Lutron's gadget lets you dim the bulb, rather than simply turn it on or off. Dimmer A dimmer setting is also available on some smart plugs, such as the Lutron Caseta Dimmer Plug as mentioned above. Yes, even Siri. This smart plug has a physical switch, so if you don't want to use your voice or an app to turn your appliance on or off, you can click the switch on the Wemo, which can make it seem like you're home even when you're not by turning a lamp on intermittently. Read our full Wemo WiFi Smart Plug review. (Image credit: Kasa) A compact, affordable smart plug option Priced at just \$8 per plug, the Kasa Smart Wi-Fi Mini Plug is one of the best smart plugs in terms of value. You can also use other Wyze products as triggers — for example, having the plug turn on a light if a Wyze Cam detects motion. This version is rated for 15 amps. And while it doesn't have energy monitoring like some other smart plugs, the Wemo WiFi Smart Plug does work with all the major smart assistants. Using this, you could control several power points in a room at once — for instance, you might want to switch off all of the downstairs lights once you've gone to bed. Better yet, if you have the Wyze Bulb, Wyze Cam or Wyze Smart Lock, you can integrate the Wyze Plug with your existing system. One of the benefits of the Wyze Plug is Vacation mode, which is similar to the Wemo's Away mode. It's IP64-rated, so it can endure everyday rain, but you should still leave this plug facing downwards with the outlets covered when not in use. We love the app that comes with this device and it's really what sets it apart from other outdoor smart plugs. It comes packed with all the features of Alexa, including compatibility with routines, schedules, timers, and other advanced automations. An individual plug is just \$13, and the company's other smart home products have generally been very reliable. When the Wyze Plug is on this setting, it will turn your stuff on and off your electronics at random, making it seem like you're home. (Image credit: Lutron) The Lutron Caseta Dimmer Switch Starter Kit is one of the best smart plugs because it works with any desk or table lamp (and up to 800 different bulbs), making the "dumb" device smart. Extras plug cost about \$54 each. Within the Ring app, you can configure the two outlets to work together or separately, and create schedules for when it turns on and off. Some smart plugs are chunkier than they look in the pictures, so make sure you check and measure out the dimensions. For example, you can set it up so that if your smart doorbell picks up a potential burglar or someone is trying your smart lock, the smart plug will switch on the lights so it looks like you're home. In doing this, you can see how much certain appliances are costing you on a daily basis, including in its standby mode, and you can find ways to cut back and save money. If you want to take this tech outside, we've looked into finding the best outdoor smart plugs as well. The cord is a little short at around 6 inches, and the plug is in-line with the cord, so it was a bit harder to cram it into my outdoor outlet and close the cover. The Wyze Plug has two sockets; at the top of the front of the Plug are two buttons to control each socket, with small LEDs that show which is active. As one of the best smart plugs for outdoor use, the Kasa Smart Outdoor Plug KP400 will raise the IQ of your front porch or backyard deck. You can also create scenes and automations which will work with other Kasa devices. In fact, here are 10 things you never knew you could do with a smart plug. This is a great feature if the smart plug is intended for lighting as it gives you much more control than just switching on and off. Timer/Scheduling Most smart plugs come with a timer. With either the Alexa app or any of the best Alexa speakers, you can control the Amazon Smart Plug from wherever you are in your home. We like that the Amazon Smart Plug has a physical on/off button and an LED to indicate its status. With four outlets and four USB ports, it can accommodate as many devices as some surge protectors can. We've even come across apps which aren't fully translated into English. Will it block my other outlet? That said, at \$79 for the unit, it's a bit pricey compared to other options. The button makes a little clicky sound. Unlike most other smart plugs, the Ring needs to connect to a hub, which can either be a Ring Bridge (\$49) or an Amazon Echo smart speaker. Will it work with more than Alexa? If you want a smaller design, check out TP-Link's HS105, the iHome ISP6X, and the Belkin WeMo Mini. For example the Kasa Smart Wi-Fi Power Strip is six smart plugs built into one (with three USB ports to boot). In addition to making sure the plug actually turns on the thing that's plugged into it, we also evaluate the plugs on several factors: Design: Can you fit more than one plug into an outlet? It's more compact than most offerings out there, so you won't block your outlet, too. On the front of the Ring is a large circular button that's blue in the center; you can press on either side of the button to control each outlet independently. You might want to download your intended smart plug's app before you purchase to see what you're dealing with. How we test the best smart home plugs Reviewing a smart plug isn't as simple as plugging it in. As of this writing, the Wyze Plug Outdoor works with Alexa, but not Google Home. (Image credit: Best Buy) You've probably caught on to our trust in TP-Link's offerings. Connect to other smart devices Some smart plugs can also connect and communicate with other smart devices through IFTTT, which has its uses. Want to take advantage, but not sure which to buy? Scheduling the power supply has its uses too — your lights can easily deter burglars at night when you're not at home. What are the best smart plugs? Not all smart plugs are as good as the claim, so we spent hours testing options to find the best smart plugs worth buying. After testing dozens of available smart plugs, we think the best overall is the \$25 Wemo WiFi Smart Plug. Setup couldn't be easier, being compatible with Alexa, Google Assistant, SmartThings and IFTTT, and you can schedule exactly when you want your lights on and off. Smart connectivity and voice control are brilliant features to have — nothing's more convenient than asking Alexa to switch off your lights, and watching technology do the rest. By accessing it via your phone, you can control when you want the power to flow through to the appliance. For the price, the Kasa Smart WiFi Lite is perfect for adding to all your home's lamps or other low-power gadgets. We've tested other smart plugs and smart home devices from TP-Link and found them to be safe, easy-to-use and reliable. It's more compact than the previous category champ, ironically called the Wemo Mini, while maintaining all the handy scheduling features. I especially like that the prongs are at a right angle to the cord; it makes it much easier to close the door. The Ring also comes with three screws and wall anchors. However, it's worth it for spaces where you have several appliances set up, like in a home office or entertainment center. (Image credit: Amazon) If you'd like a smart power strip for less, our favorite choice is the Teckin Smart Power Strip. You can control each connected device individually using the Kasa app, Alexa or Google Assistant, or buttons on the device itself. Better yet, the Kasa Smart Wi-Fi Power Strip has a surge protector built in, which most individual smart plugs (and most of the best smart plugs) lack. This has more uses than you'd first think: you can say goodbye to light switches, take advantage of out of reach plug points and much more. Perhaps Google Assistant and Siri could be added down the line, but we'll have to see. How to choose the best smart plug for you Before you decide which smart plug is best for you, here's some things you need to consider: 1. We'd love this smart plug even more if it were compatible with voice assistants besides Alexa, though. Some brands, such as iHome, can also work with Apple HomeKit. 3. It also has a clever Away mode. Like most outdoor smart plugs, the Wyze Plug Outdoor is a black box, with a cord on one end and two outlets on the other. That said, we believe it's worth the investment because the kit requires very limited input once you set it up with your smart home routines. Read our full Lutron Caseta Dimmer Switch Starter Kit review. (Image credit: Wyze) Wyze has built a reputation on making good low-cost smart home devices, and the Wyze Plug outdoor is yet another such product. Is the app any good?
